

HOW TO GENERATE HTML CODE

All product content should be generated in HTML code. We recommend you to use NotePad software, which can be downloaded from the following link:

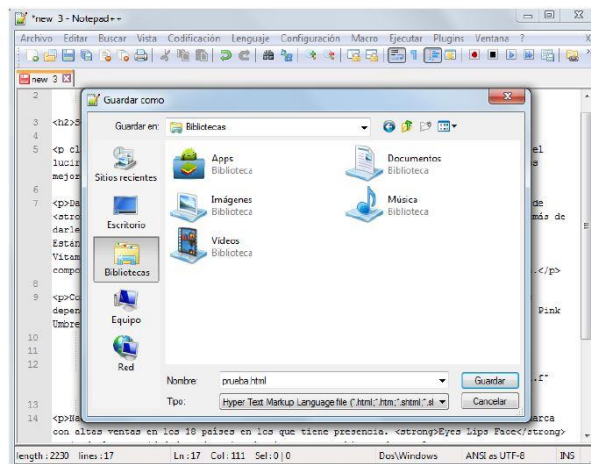

<http://notepad-plus-plus.org/>

1. After you install NOTEPAD in your computer, open it and a window like this will appear:

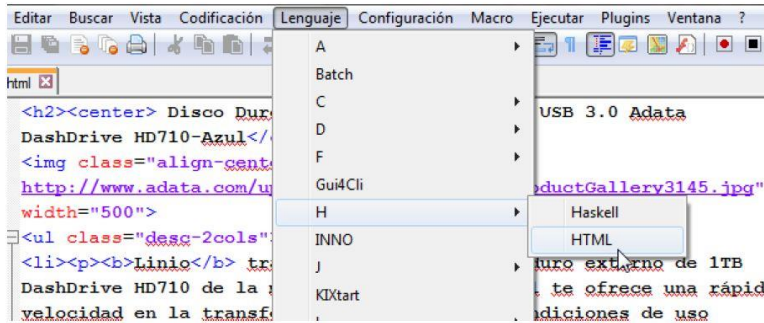

2. Save your file following the next guideline:

File-> Save as-> "Hyper Text Markup Language" file -> Save

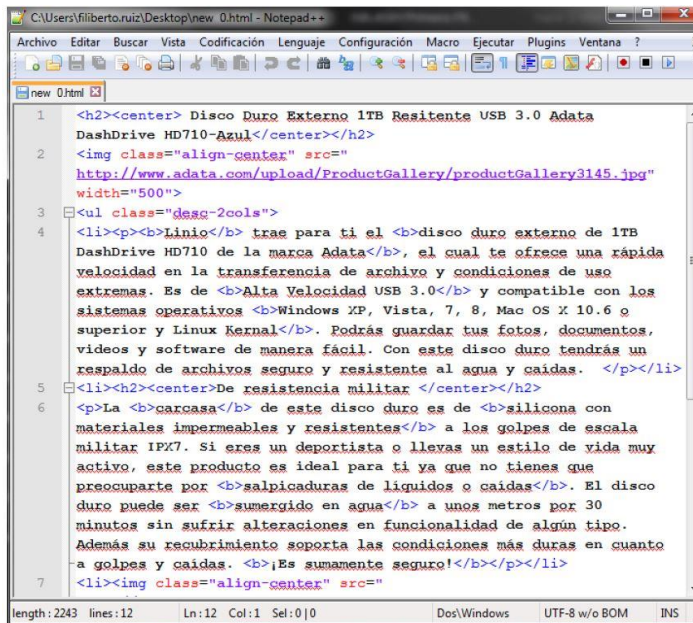

3. Select the language you will use. In this case HTML.

Language-> H> HTML

4. Now you can enter text and tags in the workspace. If the labels have been entered correctly, they will be displayed in red and blue.

4. Finally copy the HTML code and paste it in your "description" or "short_description" field.
